## **DETAILED ACTION**

### ***Drawings***

1. The drawings are objected to for the reasons indicated on the accompanying form PTO 948. Corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance. See 37 CFR 1.85(a) and MPEP 608.02(b).

### ***Information Disclosure Statement***

2. The listing of references in the specification is not a proper information disclosure statement. 37 CFR 1.98(b) requires a list of all patents, publications, or other information submitted for consideration by the Office, and MPEP § 609 A(1) states, "the list may not be incorporated into the specification but must be submitted in a separate paper." Therefore, unless the references have been cited by the examiner on form PTO-892, they have not been considered.

### ***Claim Objections***

3. Claims 2 and 3 objected to because of the following informalities:

Claims 2 and 3 are fail to use article in the sentence structure. Claim 2 should read e.g. "expressed in a pepper plant" or "expressed in the pepper plant". An article is necessary before 'microorganism' in claim 2, before 'cDNA' in claim 3 and before 'nucleotide' in claim 3.

Appropriate correction is required.

***Claim Rejections - 35 USC § 102***

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-3 are rejected under 35 U.S.C. 102(b) as being anticipated by Frommer (US Patent 5,719,043). Frommer teaches a cDNA nucleic acid molecule that is 100% identical to the nucleotide sequence of SEQ ID NO: 1 (see Frommer, SEQ ID NO: 1; regarding claim 3 of the instant application). This cDNA taught by Frommer encodes a protein that is 100% identical to the amino acid sequence of SEQ ID NO:2 (see Frommer, SEQ ID NO: 2; regarding claim 1 and 2 of the instant application). Frommer teaches the identical nucleic acid and protein products of claims 1-3, and therefore anticipates the claims.

Claims 1 and 2 of the instant application recites the encoded protein as a pepper thionin-like protein having the amino acid sequence of SEQ ID NO: 2, which is expressed in pepper in response to infection. As such, these limitations of claims 1 and 2 are directed to additional inherent properties of the protein taught by Frommer. It is noted that in *In re Best* (195 USPQ 430) and *In re Fitzgerald* (205 USPQ 594) discuss the support of rejections wherein the prior art discloses subject matter which there is reason to believe inherently includes functions that are newly cited or are identical to a product instantly claimed. In such a situation the burden is shifted to the applicants to “prove that subject matter shown to be in the prior art does not possess characteristic relied on” (205 USPQ 594, second column, first full paragraph). Thus, the reference anticipates the invention as claimed.
